The global Shaft Generator Motor System market size is predicted to grow from US$ 116 million in 2025 to US$ 203 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

In 2024, the global market sales volume of shaft generator motor systems was approximately 960 units, with an average unit price of approximately US$115,000 and an industry gross profit margin of approximately 20%–28%. Shaft generator motor systems are a type of marine propulsion-electric integrated system that relies on the rotational speed of the ship's main engine crankshaft/intermediate shaft and drives a synchronous generator through a gearbox, coupling, or variable speed constant frequency (VSG) power conversion system to output electricity. They are used to replace diesel auxiliary generators for power generation under navigation conditions, providing a stable energy source for the ship's loads (HVAC, lighting, living quarters), propulsion auxiliary systems (pumps, compressors, hydraulic stations), and navigation electronic equipment. Typical rated power range is 900kW–5,500kW, power factor is 0.8–0.95, efficiency can reach 94%–97%, output can be 400/440/690V, frequency supports direct 50/60Hz or VSG constant frequency mode; to adapt to variable speed navigation, some systems are equipped with reluctance speed compensation and active grid-connected inverter modules to maintain stable power quality within the main engine speed range of 68–110%. Upstream raw materials for the main shaft generator system include high-energy-product rare-earth permanent magnets (Nd-Fe-B), high-permeability silicon steel sheets, enameled copper wire and Class F insulation materials, marine-grade corrosion-resistant structural steel (A/B/AH36), large spherical roller bearings, and SiC or IGBT power semiconductor modules. Raw material costs account for approximately 60%–68% of the total system cost. Typical 13,000–18,000 TEU container ships use one shaft generator motor system per ship, cruise ships

usually have two parallel systems due to large loads, offshore platform supply vessels (PSV/OSV) are equipped with 1–3 systems under DP2/DP3 redundancy requirements, and LNG dual-fuel ships have a significantly higher configuration rate due to the need for cooling/reliquefaction loads.

United States market for Shaft Generator Motor System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Shaft Generator Motor System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Shaft Generator Motor System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Shaft Generator Motor System players cover Wartsila, RENK, ABB, STAMFORD, The Switch, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
