The global Shaftless Screw Feeder market size is predicted to grow from US\$ 294 million in 2025 to US\$ 375 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

The shaftless screw feeder is a kind of equipment used for material conveying. Its main feature is that it adopts a screw conveying device with a shaftless design. The rotating spiral blade pushes the material along the conveying channel to realize the conveying and distribution of the material. Unlike the traditional screw feeder, the shaftless screw feeder does not use the middle drive shaft. This design reduces the friction between the material and the shaft, reduces the risk of material breakage and contamination, and is particularly suitable for conveying materials with high viscosity and easy adhesion, such as mud, wet sand, fly ash, asphalt, etc. The shaftless screw feeder is widely used and is often used in mining, chemical industry, construction, environmental protection and other fields. It has the advantages of simple structure, easy maintenance, strong conveying capacity and wide adaptability.

United States market for Shaftless Screw Feeder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
