Shaking incubators are designed to simultaneously incubate and shake or agitate samples. They are ideal for cell culture, cell aeration and solubility experiments, or labs carrying these types of research. One of the primary benefits of a shaking incubator is that if you regularly require the combination of shaking and incubating then having a dedicated shaking incubator removed the requirement to place a separate shaker inside your incubator. Instead, you have one dedicated piece of equipment for incubating and shaking your samples, simplifying the process and improving control over the process.
