Shale gas is natural gas that is found trapped within shale formations. Shale gas has become an increasingly important source of natural gas in the United States since the start of this century, and interest has spread to potential gas shales in the rest of the world

Hydraulic fracturing is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock formations through which natural gas, petroleum, and brine will flow more freely.

Global core shale gas hydraulic fracturing manufacturers include Halliburton, Schlumberger, Baker Hughes etc. The top 5 companies hold a share about 50%. North America is the largest market, with a share about 30%, followed by Europe and China with the share about 16% and 15%.
