The global Shape and Profile Measuring Instruments market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The shape profile measuring instrument is a testing instrument used to perform sub-nanometer measurements on the surfaces of various precision devices and materials. It is an optical testing instrument that uses white light interferometry technology, combined with precision Z-axis scanning modules, 3D modeling algorithms, etc. to perform non-contact scanning of the device surface and establish a 3D image of the surface. The system software processes and analyzes the device surface image and obtains 2D and 3D parameters that reflect the device surface quality, thereby achieving 3D measurement of the device surface morphology.
