A bracket is a support or mounting bracket used to secure machine parts. Brackets that are manufactured through sheet metal processing are referred to as sheet metal brackets. Sheet metal brackets are often processed through bending, drilling, tapping, and either C-chamfering or R-machining to prevent injuries.

To increase strength and support heavy loads, rib structures are welded onto these brackets, and techniques such as bending and pressing (triangular rib processing) are employed. For heavy objects, sheet metal materials are typically iron-based, whereas for lighter objects, aluminum-based or other iron-based materials are used.

The global Sheet Metal Bracket market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
