A sheet metal chassis is a structural framework typically made from thin sheets of metal, such as steel or aluminum. It serves as the base or skeleton upon which various components of a machine, device, or piece of equipment are mounted. The sheet metal is usually cut, bent, and welded together to form a rigid and durable structure that can withstand the forces and stresses associated with the operation of the attached components. In many applications, like in electronics enclosures, automotive bodies, or industrial machinery, the sheet metal chassis provides mechanical support, protection to internal parts from external impacts and environmental factors, and also helps in organizing and securing the different elements in a specific layout for efficient functioning.

United States market for Sheet Metal Chassis is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sheet Metal Chassis is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Sheet Metal Chassis is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
