The report requires updating with new data and is sent in 48 hours after order is placed.

The global Sheet Molding Compound (SMC) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Sheet molding compound (SMC) is both a process and reinforced composite material. The composite is a “ready to mold” glass or carbon fiber reinforced polyester material primarily used in compression molding. The SMC sheets are manufactured by dispersing long strands of chopped glass fibers or carbon fibers on a bath of polyester resin, vinylester resin or epoxy resin.

SMC materials are thermosets and contain glass or carbon reinforcement levels between 10 and 60 %. The longer fibers in SMC result in better strength properties than standard bulk molding compound (BMC) products. Typical applications include demanding electrical applications, corrosion resistant needs, structural components at low cost, automotive, and transit. SMC delivers high surface quality. SMC is used for larger parts where higher mechanical strength is needed.

In this report, the SMC we surveyed are finished product of sheet molding compound, which is counterpart of BMC (Bulk molding compound).

In Asia-Pacific market, Leading players in SMC industry are IDI Composites International, SDK, Menzolit, Continental Structural Plastics, Molymer SSP, Yueqing SMC & BMC, etc. IDI, SDK, Polynt and Molymer SSP leading the market with 20% of the market.
