The shielded AC power cord is a kind of power cord. Compared with the unshielded AC power cord, it has better electromagnetic shielding ability, and can effectively block the influence of external electromagnetic interference signals, thereby improving the anti-interference performance of the equipment. Shielded AC power cords typically consist of three parts: the inner power cord (usually two wires), the electromagnetic shield, and the outer insulation. Among them, the electromagnetic shielding layer is the most important part. It is made of conductive materials, such as copper foil, aluminum foil,

etc., and is used to isolate the power line from the surrounding environment and block the interference of external electromagnetic interference signals. Shielded AC power cords are often used in occasions that require high electromagnetic compatibility, such as medical equipment, precision instruments, and communication equipment. In addition, in some special environments, such as high electromagnetic radiation and high electrical noise, the use of shielded AC power cables can effectively reduce the failure rate of equipment and improve the reliability of equipment.
