## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Shim tape is a thin metal tape widely used to adjust the position and fine-tune the height of equipment by inserting it between the gaps.

Shim means 'filler.' For example, when each part is assembled, each part is within tolerance, but when the parts are assembled, the overall position may not fit together due to accumulated tolerances.

In such cases, fine adjustment of the thickness of the parts that do not match can be done with a shim tape to align the parts. Also, when the plane of a component set in a device is tilted, the tilted plane can be fine-tuned by inserting a shim tape of the required thickness.

The global Shim Tape market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
