The global Ship Ballast Water Treatment Equipment market size is predicted to grow from US\$ 738 million in 2025 to US\$ 1137 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2025, global Ship Ballast Water Treatment Equipments approximately 21,483 units, with an average global market price of around US\$ 35,095 per unit. Gross margin is about 42%. The cost is 20,355 usd. The Production is 35,000 units. Ship Ballast Water Treatment Equipment refers to onboard systems installed on vessels to treat ballast water before discharge, removing or inactivating invasive aquatic organisms and pathogens in compliance with international regulations such as the IMO Ballast Water Management Convention (D-2 standard). These systems typically integrate filtration with a treatment technology?such as UV irradiation, electrochlorination, chemical dosing, ozonation, or deoxygenation?and include sensors, controls, and monitoring units to ensure compliant operation across varying water qualities. Ship ballast water treatment equipment is widely deployed on bulk carriers, tankers, container ships, and offshore vessels, enabling environmentally responsible ballast operations while supporting global maritime trade under increasingly stringent environmental requirements.

Stronger Compliance & Global Standardization

Driven by IMO Ballast Water Management Convention and stricter regulations, systems will increasingly comply with IMO D-2 and USCG standards.

Low Energy & Green Technologies

Development toward low-energy UV systems and chemical-free solutions, reducing environmental impact and supporting sustainability goals.

Smart & Remote Monitoring

Integration of IoT enables remote monitoring, automated operation, predictive maintenance, and data tracking.

Compact & Modular Design

More compact and modular systems will facilitate installation in both newbuild and retrofit vessels.

Hybrid Treatment Technologies

Combining multiple methods (e.g., filtration + UV, electrolysis + chemicals) to improve efficiency and adaptability to varying water conditions.

Lower Operational Costs (OPEX)

Improved reliability and reduced maintenance requirements will lower long-term operating costs for shipowners.

Digital Compliance & Data Logging

Enhanced data recording and reporting functions to meet port state control (PSC) inspections and ensure traceability.
