A turbocharger is a supercharger that is driven by exhaust gasses instead of belt driven off the crank, or by an electric motor, etc. Turbochargers, like regular superchargers, are designed to pressurize the intake charge of an engine to increase power output. A turbo is plumbed into both the exhaust and intake systems of an engine and is comprised of two halves - a turbine (exhaust side) and a compressor (intake side).

Ships Turbocharger refers to turbocharger used for ship engine.
