Ship shore power high and low voltage system refers to a set of equipment that uses shore power to supply the ship's power system when the ship is moored, including transformers, distribution cabinets, power electronic equipment, etc. The shore power system converts high or low voltage power from the shore into a form of power suitable for ships through appropriate conversion and distribution equipment, and is used for high-power equipment such as the ship's main engine, cabin air conditioning, marine equipment, and lighting and sockets in the ship. The design and use of the ship's shore power high and low voltage system provides ships with safe and reliable power supply while minimizing environmental impact and operating costs.
