The ship stern tube seal is an important sealing device installed between the ship stern shaft and the stern tube. Its main function is to prevent seawater from entering the cabin and to prevent lubricating oil from leaking into the marine environment. It plays a key role in ensuring the normal operation and environmental safety of the ship's propulsion system. The stern tube sealing system is usually composed of multiple sealing rings, including oil seals, water seals and spare seals. It is made of elastic materials such as rubber, polytetrafluoroethylene or metal composites, which can adapt to the rotation and small displacement of the stern shaft, ensuring good sealing performance under high pressure, corrosion and dynamic conditions.

United States market for Ship Stern Tube Seals is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
