A Ship - to - Shore (STS) Crane Simulator is a training and planning tool designed to replicate the operation of a ship - to - shore crane. It uses advanced technology such as computer - generated graphics, motion platforms, and sometimes virtual reality to create a realistic environment that mimics the actual port setting and the functions of the crane. It allows crane operators to practice and master skills related to container handling, including hoisting, slewing, and trolley movements, in a safe and controlled environment. The simulator is used not only for training new operators and enhancing the skills of experienced ones but also for safety training, emergency response drills, and familiarizing personnel with port layouts and potential changes. It serves as a crucial resource to improve the efficiency, safety, and overall performance of ship - to - shore crane operations.
