A Shipping Temperature Indicator is a device used to monitor and indicate whether a shipment has been exposed to temperature variations beyond a specified threshold during transportation and storage. These indicators typically consist of a visual or digital display that changes color or provides a clear indication if the temperature has exceeded the acceptable range. By using these indicators, shippers and recipients can quickly assess whether the integrity of temperature-sensitive products, such as pharmaceuticals, food items, or biological samples, has been compromised. This helps ensure product quality and safety while also facilitating compliance with regulatory requirements and maintaining customer satisfaction.
