Shipyard Welding Robot is an industrial robot that can perform welding operations autonomously or according to a preset program. Shipyard Welding Robot is equipped with necessary welding equipment such as welding gun, welding wire, welding power supply, and realizes precise welding in complex spaces through high-precision robotic arms and joints. These robots combine welding technology with automation technology to improve welding efficiency, ensure welding quality, and improve the working environment in shipyards.

Shipyard Welding Robot is widely used in welding operations in hull structures, decks, cabins, pipelines, etc. They can perform multiple welding methods such as flat welding, vertical welding, horizontal welding and overhead welding to meet the diverse needs of the shipbuilding process. In addition, welding robots can also work in conjunction with other automated equipment (such as cutting robots, spraying robots, etc.) to achieve full automation of the shipbuilding process.
