The Shockwave Intravascular Lithotripsy (IVL) System is a new intravascular lithotripsy system developed based on the lithotripsy concept of urology. The IVL system perfectly combines sonic calcification fracturing technology with a balloon catheter to provide unfocused, circular and pulsed mechanical energy to calcified plaques during low-pressure expansion of the balloon to efficiently and safely destroy vascular calcified plaques and reduce calcification. Plaques are multiple and minutely fragmented or loose without affecting the integrity of the vascular intima, thereby significantly improving vascular compliance.

The global Shockwave Intravascular Lithotripsy (IVL) System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
