The global Shoe Press Belts for Papermaking Machine market size is predicted to grow from US\$ 16.73 million in 2025 to US\$ 24.43 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, global Shoe Press Belts for Papermaking Machine production reached approximately 427 units, with an average global market price of around 40 k USD per unit. Shoe press belts for papermaking machine are flexible components of shoe press systems. Usually made of rubber - like materials, they cover the shoe roll. During operation, they work with the shoe plate to create a wide nip, evenly pressing paper sheets for efficient water removal. Their durability and flexibility are key to stable press operation.

The global market for shoe press belts, as a critical consumable component of shoe press systems, is driven by the energy-saving and cost-reduction imperatives of the paper industry. Shoe press belts are wear parts with limited service life, requiring periodic replacement, which ensures recurring demand. As paper manufacturers face pressure to lower production costs, improving press section dewatering efficiency to reduce thermal drying energy has become a key operational priority. Belt performance, particularly dewatering capability and durability, directly affects overall press efficiency and steam consumption. On the supply side, shoe press belt manufacturing involves high technical barriers, with core processes historically dominated by a limited number of suppliers. In China, the industry has moved from complete import dependence to successful domestic development, with locally produced belts gradually gaining market acceptance and being deployed across domestic paper machines. Policy support for shoe press technology has been explicitly included in industrial energy conservation guidelines in several regions, encouraging

paper mills to pursue energy efficiency retrofits. In summary, the global shoe press belt market is underpinned by recurring maintenance demand from existing paper machines, initial equipment needs for new production lines, and the sustained industry-wide drive to lower energy consumption per ton of paper produced.
