Shore power connection and charging solutions refer to integrated electrical systems that provide power and battery charging to ships from the shore while they are in port, allowing ships to shut down their onboard generators, thereby reducing emissions, noise, and fuel consumption. These systems typically include shore power interfaces, charging equipment, power conversion devices, control systems, and safety protection units, simultaneously meeting the needs of both traditional shore power supply and charging for new energy vessels. The shore power connection and charging solution industry chain includes upstream power electronic devices, transformers, switchgear, cables and connectors, control units, and software platforms; midstream system integration, equipment assembly, testing, and delivery; and downstream applications covering commercial ports, container terminals, passenger ferry terminals, cruise terminals, and inland waterway shipping. Related supporting services include installation and commissioning, grid connection, system optimization, operation monitoring, and long-term operation and maintenance to ensure the safety, stability, and efficiency of shore power supply and charging. The gross profit margin of major companies in the industry is between 30% and 50%.
