Shore D hardness tester is an instrument used to measure the hardness of materials, especially rubber, plastics and other non-metallic soft materials. Invented by American engineer Albert F. Shrock, this hardness tester uses a sharp metal needle to press into the surface of a material and evaluates the hardness of the material based on the depth of the needle into the surface or the force exerted on the needle. Shore D hardness tester is mainly used to measure materials with medium hardness, especially those materials that are too soft to be measured with other types of hardness testers, such as: rubber, plastics, coatings, shoe soles, packaging materials, etc. The range of the Shore D hardness tester is designed to adapt to the hardness range of these materials. Therefore, it is necessary to select an appropriate range according to the hardness of the material when using it.

The global Shore D Hardness Tester market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
