Shot peening abrasives, in surface treatment technology, refer to a type of granular material used in shot peening process. Shot peening is a cold working process that uses compressed air or mechanical centrifugal force to spray a large number of small-diameter pellets (usually called shot peening materials) at high speed onto the surface of the workpiece to achieve a variety of effects such as cleaning, strengthening, increasing residual compressive stress, and improving the fatigue strength of the workpiece. Shot peening materials are widely used in many fields such as automobiles, aerospace, ships, and machinery manufacturing. In the automotive industry, shot peening technology is used to improve the surface hardness and wear resistance of engine cylinder blocks, crankshafts and other parts; in the aerospace field, shot peening technology is used to improve the fatigue strength and corrosion resistance of key components such as aircraft landing gear and engine blades.

The global Shot Peening Shot market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
