Abstracts

The global SHR0302 market size is predicted to grow from US\$ 264 million in 2025 to US\$ 1238 million in 2032; it is expected to grow at a CAGR of 17.9% from 2026 to 2032.

SHR0302 (generic name: Ivarmacitinib) is a highly selective oral JAK1 inhibitor independently developed by Hengrui Medicine. By selectively inhibiting Janus kinase 1 (JAK1), it regulates the signaling pathways of key inflammatory cytokines such as IL-4, IL-13, IL-23, and IFN- γ , thereby suppressing abnormal immune activation and inflammatory responses. It is mainly indicated for the treatment of a variety of autoimmune and inflammatory skin diseases as well as rheumatic immune disorders. As a new generation of highly selective JAK inhibitors, it exhibits higher subtype selectivity for JAK1, which helps reduce the risk of adverse reactions associated with non-selective inhibition while ensuring therapeutic efficacy. Its approved or investigational indications include atopic dermatitis, rheumatoid arthritis, psoriasis, alopecia areata, vitiligo, among others. As an important immune-targeted drug independently developed and commercialized in China, it demonstrates significant clinical application value and market potential. In 2025, global SHR0302 (Ivarmacitinib) production reached approximately 1.2-1.5 million bottles.

SHR0302 (Ivarmacitinib), as the first highly selective oral JAK1 inhibitor independently developed in China, is positioned at the core of the rapidly growing market for autoimmune diseases. Thanks to its high selectivity for JAK1, it achieves a favorable balance between efficacy and safety, effectively mitigating the risk of adverse reactions associated with non-selective JAK inhibitors. The drug has been approved for multiple indications including ankylosing spondylitis, rheumatoid arthritis, atopic dermatitis and alopecia areata, covering a large patient population.

On the market side, the global market for JAK inhibitors continues to expand, with the

domestic market growing notably and long dominated by imported original research drugs. Relying on its advantages as a domestic innovative drug, cost-effective pricing strategy and prospects for medical insurance access, SHR0302 is expected to rapidly achieve import substitution. Meanwhile, the expansion of its indications and the research and development of topical formulations will further unlock its market potential.

In terms of competitive landscape, there are few similar products in China. Hengrui Medicine occupies a leading position in the domestic JAK1 inhibitor sector by virtue of its complete commercialization system and clinical resources. In the future, with the continuous approval of new indications, volume growth under medical insurance coverage and advancement of internationalization, SHR0302 is expected to become a benchmark product in the field of autoimmune diseases in China with sustainable long-term growth potential.
