Shrink Fit Holder is a device that clamps the cutting tool by utilizing the principle of thermal expansion and contraction. The tool holder is usually made of special materials, with an internal diameter slightly smaller than the diameter of the tool shank. By heating the tool holder to make it expand, the tool is inserted and then cooled. After cooling, the tool holder contracts and forms a tight fit with the tool, achieving high-precision clamping. This type of tool holder is widely used in high-precision and high-speed processing fields, and is renowned for its high precision, high stability, and long lifespan.
