Shrinkage Oven is a specialized testing device used for drying samples after shrinkage rate testing of textiles. This equipment is mainly used for the standardized drying of samples such as knitted fabrics, woven fabrics, printed and dyed fabrics, clothing, and home textiles after washing or soaking. It ensures that the samples are dried under specified temperature and conditions before being used to determine the dimensional change rate, shrinkage rate, and dimensional stability after washing. A shrinkage rate drying oven typically consists of a chamber, heating system, temperature control system, circulating air system, and sample racks or suspension devices. It maintains a relatively stable temperature environment, reducing temperature and humidity fluctuations and human error caused by natural air drying. The market for this instrument is mainly concentrated in China. In 2025, the global production of Shrinkage Oven reached 4,550 units, with a global average price of US\$2,580 per unit. The gross profit margin of major companies in the industry is approximately 28%-35%.
