Sialon, a fine grain nonporous technical grade engineering material, is a silicon nitride ceramic with a small percentage of aluminum oxide added. It is a reacted mixture of SiN, SiO₂, Al₂O₃ and AlN. Sialon is outstanding in nonferrous metal contact. It is highly thermal shock resistant, strong, and is not wet or corroded by aluminum, brass, bronze, and other common industrial metals.

The growing demand for wear-resistant and high-temperature materials in industrial applications, such as cutting tools, bearings, and high-temperature components, was driving the adoption of sialon powders for their superior mechanical strength, thermal stability, and excellent wear and corrosion resistance, supporting the development of durable and high-performance ceramic products.
