SiC coated graphite products refer to graphite materials that have been coated with a layer of silicon carbide (SiC). This coating process involves depositing a thin layer of SiC onto the surface of graphite components, typically through chemical vapor deposition (CVD) or other coating techniques. The SiC coating enhances the properties of graphite by providing increased resistance to oxidation, corrosion, and wear, making the graphite more durable and suitable for high-temperature and harsh environments. SiC coated graphite products find applications in various industries, including semiconductor manufacturing, aerospace, metallurgy, and energy production, where they are utilized in applications such as crucibles, heating elements, furnace components, and protective coatings. The combination of graphite's lightweight and high thermal conductivity with SiC's superior mechanical and chemical properties makes SiC coated graphite products valuable for demanding applications requiring reliability and performance in extreme conditions.

The global SiC Coated Graphite Products market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
