The global SiC JFETs market size is predicted to grow from US$ 443 million in 2025 to US$ 835 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

A silicon carbide (SiC) JFET is a junction-based normally-on transistor type that offers the lowest on-resistance RDS(on) per unit area and is a robust device. JFETs are less prone to failure compared to traditional MOSFET devices and suit circuit breaker and current limiting applications.

According to our Semiconductor Research Center, in 2022, the global SiC wafer was valued at US$ 750 million, will grow rapidly in next six years, driven by the strong demand from electric vehicle (EV). Currently the 6 inch SiC substrates are dominating this market, and in next six years, more players will put into production the 8 inch SiC wafers. Currently the key players of SiC are mainly located headquartered United States, Europe, Japan and China, especially in China, more companies are entering the SiC market. It is predicted that, Chinese companies will play key roles in the SiC market in next ten years.
