According to our LPI (LP Information) latest study, the global SiC Rectifiers market size was valued at US\$ 435.3 million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the SiC Rectifiers is forecast to a readjusted size of US\$ 2493.9 million by 2029 with a CAGR of 28.3% during review period.

The research report highlights the growth potential of the global SiC Rectifiers market. With recovery from influence of COVID-19 and the Russia-Ukraine War, SiC Rectifiers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of SiC Rectifiers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the SiC Rectifiers market.

Silicon Carbide schottky diodes have the advantage of silicon carbide compound's superior physical characteristics over Si, with 4 times better dynamic characteristics and 15% less forward voltage. They have the lowest reverse recovery time (trr) compared to the various types of fast recovery, ultrafast recovery, and super-fast recovery diodes. They also have the lowest forward voltage drop (VF). Silicon carbide is a compound semiconductor with more high level power characteristics than silicon, including a bandgap approximately three times greater, a dielectric breakdown field 10 times higher, and a thermal coefficient three times larger.

The key players of SiC diodes (SiC SBD) are STMicroelectronics, Infineon, Wolfspeed, Rohm, onsemi, Microchip (Microsemi), and San'an Optoelectronics, etc. The top five

players hold a share over 70 percent.
