The SiC trench etcher is a precision equipment meticulously designed for etching precise trench structures on the hard and chemically stable silicon carbide material. This equipment optimizes critical performance attributes of power devices, including breakdown voltage, on-state resistance, channel mobility, and time-dependent gate oxide breakdown, by precisely controlling the trench's bottom width, corner radius, sidewall angle, depth, and roughness. It enhances carrier mobility while reducing on-state resistance to meet the demand for efficient power devices in the automotive and clean energy sectors, ensuring accurate measurement of epitaxial layer growth and injection layer depth during the highly complex manufacturing process, thereby improving the performance and reliability of the devices.

United States market for SiC Trench Etcher is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for SiC Trench Etcher is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for SiC Trench Etcher is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
