Abstracts

The global SiC Wafer PL Mapping System market size is predicted to grow from US\$ 117 million in 2025 to US\$ 249 million in 2032; it is expected to grow at a CAGR of 11.2% from 2026 to 2032.

SiC Wafer PL Mapping System refers to wafer-level, non-contact and non-destructive optical inspection and metrology equipment designed to characterize silicon carbide substrates, 4H-SiC epitaxial wafers and selected processed SiC wafers through photoluminescence excitation, signal acquisition and spatial mapping. The system typically uses ultraviolet or near-ultraviolet excitation to generate PL responses from the SiC material, then captures intensity, spectral or imaging information through sensitive detectors and converts the measurements into full-wafer defect maps. Depending on system architecture, PL can operate as a dedicated mapping channel or be integrated with bright-field, differential interference contrast, dark-field scattering, reflectance, topography or Raman measurement. Production-oriented systems increasingly incorporate automated wafer handling, pre-alignment, recipe management, defect coordinate review and automatic defect classification. Key technical parameters include supported wafer diameter, inspection throughput, spatial resolution, excitation wavelength, defect sensitivity, repeatability and automation level. The primary applications are quality control and process monitoring across SiC crystal growth, substrate processing, epitaxy and power semiconductor manufacturing, particularly for identifying and classifying crystallographic and epitaxial defects such as basal plane dislocations and stacking faults. IEC standards have established photoluminescence as a recognized non-destructive method for defect identification in 4H-SiC homoepitaxial wafers.

Key Findings

In 2025, global SiC Wafer PL Mapping System production reached approximately 92 Units. The average price is approximately \$130,000

High-volume demand is shifting toward integrated surface inspection and PL architectures rather than standalone mapping

200 mm SiC manufacturing is raising requirements for throughput automation and full-wafer defect classification

Market Trends

The technology direction of the SiC Wafer PL Mapping System market is moving from standalone photoluminescence characterization toward integrated, automated wafer inspection. Earlier systems were primarily valued for visualizing the spatial distribution of luminescence intensity and locating selected crystallographic defects, whereas newer production platforms increasingly combine PL with surface inspection, differential interference contrast, dark-field scattering, reflectance and other optical channels within a common wafer coordinate system. This enables manufacturers to correlate different defect signatures, reduce manual review and move from simple defect imaging toward automated classification and process feedback. Product development is also increasingly centered on higher throughput, 200 mm compatibility, automated wafer handling and factory integration. The direction is consistent with the broader transition of SiC manufacturing toward 200 mm production: STMicroelectronics has continued to develop 200 mm SiC manufacturing capacity, while Infineon has already introduced customer products based on 200 mm SiC wafer technology. As wafer value rises and larger wafers contain more potential device area, the economic importance of early defect detection and yield protection increases, supporting continued upgrades in wafer-level PL inspection.

Market Dynamics

Drivers

The principal growth driver is the increasing requirement for defect control across the SiC manufacturing chain. SiC substrates and epitaxial wafers can contain crystallographic and epitaxial defects that affect device yield, electrical performance and reliability, making non-destructive wafer-level characterization important at incoming inspection, substrate processing, epitaxial growth and device manufacturing stages.

The transition from 150 mm toward 200 mm manufacturing further increases the value concentrated on each wafer and strengthens the economic case for comprehensive inspection before additional processing cost is incurred. In parallel, higher-volume SiC production is increasing customer demand for automated handling, faster mapping, repeatable defect classification and process-control data that can be fed back into crystal growth, polishing and epitaxy. IEC recognition of PL-based defect identification also supports greater consistency in industrial adoption and defect evaluation practices.

Restraints

Market expansion is constrained by the relatively narrow installed customer base, high equipment qualification requirements and the capital-intensive nature of advanced semiconductor inspection. SiC Wafer PL Mapping System purchases are concentrated among substrate suppliers, epitaxy companies, integrated device manufacturers, foundries and specialized research or quality-control organizations, resulting in a much smaller addressable equipment pool than general semiconductor optical inspection. Customers also require strong correlation between detected PL signatures and yield-relevant defects, meaning new equipment suppliers must complete lengthy application development, recipe optimization and customer validation before entering high-volume manufacturing. In addition, PL is only one component of SiC defect characterization; optical microscopy, scattering inspection, Raman analysis and X-ray-based techniques may provide complementary information. This limits the value proposition of low-automation standalone PL tools and places increasing pressure on suppliers to provide integrated inspection functionality rather than a single measurement channel.

Opportunities

The strongest market opportunities lie in 200 mm production conversion, integrated multimodal inspection and local supply-chain expansion. As more SiC manufacturers move advanced production toward larger wafer diameters, equipment suppliers have opportunities to replace engineering-scale tools with automated systems capable of higher throughput, full-wafer mapping and systematic defect classification. Another opportunity is the integration of PL with DIC, dark-field scattering, reflectance, Raman and other metrology channels, enabling one platform to generate a more complete defect signature and improve correlation between material defects and manufacturing yield. Chinese equipment suppliers are also creating additional opportunities through localized equipment development and service capabilities, particularly where customers seek shorter response times, localized process support and alternative sources of compound-semiconductor inspection equipment. The opportunity is therefore

increasingly linked to platform functionality and process-control integration rather than merely adding more PL measurement capacity.

Challenges

The main long-term challenge is maintaining measurement relevance as SiC defect requirements and production processes evolve. Different substrate, epitaxy and device manufacturers may use different defect taxonomies, acceptance thresholds, recipes and combinations of inspection techniques, limiting complete standardization of equipment configurations. Higher throughput must also be achieved without sacrificing defect sensitivity, spatial resolution or classification accuracy, particularly as systems move into 200 mm high-volume production. Equipment vendors face additional difficulty in converting technical capability into sustainable installed base because semiconductor customers place substantial weight on production history, service response, recipe portability and tool-to-tool matching. The market may therefore remain structurally divided between a small group of globally qualified production-platform suppliers and a larger number of specialized or regional vendors. Standalone PL technology itself retains strong technical relevance, but suppliers that fail to integrate automation, complementary inspection channels and advanced defect analytics face greater competitive pressure.

Industry Chain Analysis

The upstream segment of the SiC Wafer PL Mapping System industry consists primarily of ultraviolet and near-ultraviolet laser sources, optical components, filters, high-sensitivity cameras and photodetectors, spectrometers, precision motion stages, wafer-handling modules, vibration-control components, industrial computers and image-processing hardware. Software is an increasingly important part of upstream and system-level value creation because defect recognition requires signal processing, wafer-map reconstruction, image registration, automatic defect classification and equipment-control algorithms. The midstream consists of equipment OEMs that integrate optical architecture, precision mechanics, wafer automation and analytical software into complete mapping or inspection platforms. Differentiation at this level is determined less by individual component cost than by optical design, throughput, detection sensitivity, recipe libraries, defect-classification algorithms, system reliability and customer qualification experience. Downstream users include SiC crystal and substrate manufacturers, epitaxial wafer producers, power semiconductor IDMs and fabs, as well as selected research and material-analysis organizations. Value creation is highest where the system can identify yield-relevant defects early enough to prevent

additional processing cost and can provide stable data for process optimization. As a result, production qualification, application engineering and after-sales process support represent an important part of the economic value of the equipment rather than simply supplementary services.

Segment Insights

By system architecture, integrated surface-inspection-plus-PL systems and dedicated production-grade PL mapping or imaging systems constitute the most commercially important segments. Dedicated PL systems retain advantages where customers require detailed spectral or luminescence information for materials characterization and epitaxial process optimization, while integrated platforms are gaining strategic importance in high-volume manufacturing because they can correlate surface morphology with subsurface or crystallographic defect signatures. Spectral PL platforms remain important for process development and engineering analysis, while research-grade Raman-PL systems serve a smaller but technically specialized segment. By automation level, fully automated and production-oriented systems generate a disproportionate share of equipment value because wafer handling, throughput and factory integration materially increase system complexity and selling price. By wafer stage, substrate and epitaxial wafer inspection remain the principal applications, while processed-wafer inspection represents a more selective opportunity. The most important structural shift is toward 200 mm-compatible equipment, although 150 mm-compatible platforms continue to represent a significant installed and replacement market during the transition period.

Downstream Market Opportunities

The most attractive downstream opportunity is concentrated in customers where defect detection can directly influence wafer acceptance, epitaxy optimization and device yield. SiC substrate producers require full-wafer inspection to characterize material quality before shipment or further processing, while epitaxy suppliers use PL mapping to identify defects introduced or propagated during epitaxial growth and to monitor reactor and process consistency. Power semiconductor manufacturers increasingly require incoming wafer qualification and process-control data as SiC device production scales into automotive traction inverters, charging infrastructure, industrial power conversion, renewable energy and data-center power applications. The transition toward larger wafers strengthens these requirements because more potential device value is concentrated on each substrate. Consequently, the highest-value downstream opportunity is not simply the largest SiC production volume, but production

environments where inspection data can be systematically connected to yield management and process feedback.

Regional Insights

Asia-Pacific represents the broadest concentration of SiC manufacturing activity and specialized equipment supply, but regional competitive structures differ substantially. Japan has one of the strongest specialist supplier clusters, supported by established semiconductor inspection, optical measurement and precision-equipment capabilities. China has emerged as the most active localization market in the identified supplier pool, with several domestic companies developing SiC inspection platforms that combine PL with DIC, scattering or other optical channels. This creates opportunities in localized service, equipment qualification and domestic supply-chain substitution, although global high-volume installed bases remain more established among international vendors. North America retains a strong position in high-end process-control platforms through established semiconductor inspection companies, while Europe combines specialized metrology suppliers with significant SiC device manufacturing investment. Southeast Asia is becoming strategically more important on the demand side as advanced SiC manufacturing capacity expands in Malaysia. The regional market is therefore likely to develop through a combination of global platforms serving multinational fabs and increasingly capable local suppliers serving regional substrate, epitaxy and device customers.

Competitive Landscape Analysis

The SiC Wafer PL Mapping System market has a relatively concentrated high-end competitive structure surrounded by a broader group of specialized and regional suppliers. Lasertec, KLA, HORIBA and Onto Innovation form the leading global group based on their production-oriented inspection capabilities, semiconductor process-control experience and access to high-volume customers, while Toray Engineering, Semilab, Intego and other specialist suppliers compete through PL imaging, spectral metrology or focused SiC inspection expertise. Chinese manufacturers have become increasingly relevant in the second competitive tier, particularly through integrated systems combining bright-field, dark-field or scattering inspection with PL and automated classification. Strategic consolidation is also reshaping the supplier base: HORIBA completed the acquisition of Korean PL wafer-inspection specialist EtaMax in April 2025, while Onto Innovation acquired Lumina Instruments in 2024, demonstrating the value placed on complementary compound-semiconductor inspection technologies and established application expertise. Competition is consequently moving away from a

single measurement specification toward platform-level capability, including throughput, multimodal inspection, defect classification, automation, customer qualification and local application support.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the "SiC Wafer PL Mapping System Industry Forecast" looks at past sales and reviews total world SiC Wafer PL Mapping System sales in 2025, providing a comprehensive analysis by region and market sector of projected SiC Wafer PL Mapping System sales for 2026 through 2032. With SiC Wafer PL Mapping System sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world SiC Wafer PL Mapping System industry.

This Insight Report provides a comprehensive analysis of the global SiC Wafer PL Mapping System landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on SiC Wafer PL Mapping System portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global SiC Wafer PL Mapping System market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for SiC Wafer PL Mapping System and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global SiC Wafer PL Mapping System.

This report presents a comprehensive overview, market shares, and growth opportunities of SiC Wafer PL Mapping System market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Integrated Surface + PL Inspection

Dedicated PL Mapping/Imaging

Multi-metrology Spectral PL Platform

Research-grade Raman–PL Wafer Platform

Others

Segmentation by Automation Grade:

Fully Automated HVM System

Semi-automated Production System

Others

Segmentation by Wafer Diameter:

≤150 mm

200 mm

≥300 mm

Others

Segmentation by Application:

Incoming and Outgoing Material QC

Crystal Growth and Substrate Process Control

Epitaxy Process Control

Others

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analysing the company's coverage, product portfolio, its market penetration.

Lasertec Corporation

KLA Corporation

HORIBA, Ltd.

Onto Innovation

Toray Engineering

Semilab

CETC Fenghua

AK Optics

Qingruan Weishi

Shanghai Youruipu

Visiontec

Intego GmbH

PHOTON Design

Nanotronics

Oxford Instruments/WITec

Spirox

Seiwa Optical

Key Questions Addressed in this Report

What is the 10-year outlook for the global SiC Wafer PL Mapping System market?

What factors are driving SiC Wafer PL Mapping System market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do SiC Wafer PL Mapping System market opportunities vary by end market size?

How does SiC Wafer PL Mapping System break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
 - 2.1.1 Global SiC Wafer PL Mapping System Annual Sales 2021-2032
 - 2.1.2 World Current & Future Analysis for SiC Wafer PL Mapping System by Geographic Region, 2021, 2025 & 2032
 - 2.1.3 World Current & Future Analysis for SiC Wafer PL Mapping System by Country/Region, 2021, 2025 & 2032
- 2.2 SiC Wafer PL Mapping System Segment by Type
 - 2.2.1 Integrated Surface + PL Inspection
 - 2.2.2 Dedicated PL Mapping/Imaging
 - 2.2.3 Multi-metrology Spectral PL Platform
 - 2.2.4 Research-grade Raman–PL Wafer Platform
 - 2.2.5 Others
 - 2.2.6 SiC Wafer PL Mapping System Sales by Type
 - 2.2.6.1 Global SiC Wafer PL Mapping System Sales Market Share by Type (2021-2026)
 - 2.2.6.2 Global SiC Wafer PL Mapping System Revenue and Market Share by Type (2021-2026)
 - 2.2.6.3 Global SiC Wafer PL Mapping System Sale Price by Type (2021-2026)
- 2.3 SiC Wafer PL Mapping System Segment by Automation Grade
 - 2.3.1 Fully Automated HVM System
 - 2.3.2 Semi-automated Production System
 - 2.3.3 Others
 - 2.3.4 SiC Wafer PL Mapping System Sales by Automation Grade
 - 2.3.4.1 Global SiC Wafer PL Mapping System Sales Market Share by Automation

Grade (2021-2026)

2.3.4.2 Global SiC Wafer PL Mapping System Revenue and Market Share by Automation Grade (2021-2026)

2.3.4.3 Global SiC Wafer PL Mapping System Sale Price by Automation Grade (2021-2026)

2.4 SiC Wafer PL Mapping System Segment by Wafer Diameter

2.4.1 ?150 mm

2.4.2 200 mm

2.4.3 ?300 mm

2.4.4 Others

2.4.5 SiC Wafer PL Mapping System Sales by Wafer Diameter

2.4.5.1 Global SiC Wafer PL Mapping System Sales Market Share by Wafer Diameter (2021-2026)

2.4.5.2 Global SiC Wafer PL Mapping System Revenue and Market Share by Wafer Diameter (2021-2026)

2.4.5.3 Global SiC Wafer PL Mapping System Sale Price by Wafer Diameter (2021-2026)

2.5 SiC Wafer PL Mapping System Segment by Application

2.5.1 Incoming and Outgoing Material QC

2.5.2 Crystal Growth and Substrate Process Control

2.5.3 Epitaxy Process Control

2.5.4 Others

2.5.5 SiC Wafer PL Mapping System Sales by Application

2.5.5.1 Global SiC Wafer PL Mapping System Sale Market Share by Application (2021-2026)

2.5.5.2 Global SiC Wafer PL Mapping System Revenue and Market Share by Application (2021-2026)

2.5.5.3 Global SiC Wafer PL Mapping System Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

3.1 Global SiC Wafer PL Mapping System Breakdown Data by Company

3.1.1 Global SiC Wafer PL Mapping System Annual Sales by Company (2021-2026)

3.1.2 Global SiC Wafer PL Mapping System Sales Market Share by Company (2021-2026)

3.2 Global SiC Wafer PL Mapping System Annual Revenue by Company (2021-2026)

3.2.1 Global SiC Wafer PL Mapping System Revenue by Company (2021-2026)

3.2.2 Global SiC Wafer PL Mapping System Revenue Market Share by Company (2021-2026)

- 3.3 Global SiC Wafer PL Mapping System Sale Price by Company
- 3.4 Key Manufacturers SiC Wafer PL Mapping System Producing Area Distribution, Sales Area, Product Type
 - 3.4.1 Key Manufacturers SiC Wafer PL Mapping System Product Location Distribution
 - 3.4.2 Players SiC Wafer PL Mapping System Products Offered
- 3.5 Market Concentration Rate Analysis
 - 3.5.1 Competition Landscape Analysis
 - 3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)
- 3.6 New Products and Potential Entrants
- 3.7 Market M&A Activity & Strategy

4 WORLD HISTORIC REVIEW FOR SIC WAFER PL MAPPING SYSTEM BY GEOGRAPHIC REGION

- 4.1 World Historic SiC Wafer PL Mapping System Market Size by Geographic Region (2021-2026)
 - 4.1.1 Global SiC Wafer PL Mapping System Annual Sales by Geographic Region (2021-2026)
 - 4.1.2 Global SiC Wafer PL Mapping System Annual Revenue by Geographic Region (2021-2026)
- 4.2 World Historic SiC Wafer PL Mapping System Market Size by Country/Region (2021-2026)
 - 4.2.1 Global SiC Wafer PL Mapping System Annual Sales by Country/Region (2021-2026)
 - 4.2.2 Global SiC Wafer PL Mapping System Annual Revenue by Country/Region (2021-2026)
- 4.3 Americas SiC Wafer PL Mapping System Sales Growth
- 4.4 APAC SiC Wafer PL Mapping System Sales Growth
- 4.5 Europe SiC Wafer PL Mapping System Sales Growth
- 4.6 Middle East & Africa SiC Wafer PL Mapping System Sales Growth

5 AMERICAS

- 5.1 Americas SiC Wafer PL Mapping System Sales by Country
 - 5.1.1 Americas SiC Wafer PL Mapping System Sales by Country (2021-2026)
 - 5.1.2 Americas SiC Wafer PL Mapping System Revenue by Country (2021-2026)
- 5.2 Americas SiC Wafer PL Mapping System Sales by Type (2021-2026)
- 5.3 Americas SiC Wafer PL Mapping System Sales by Application (2021-2026)
- 5.4 United States

5.5 Canada

5.6 Mexico

5.7 Brazil

6 APAC

6.1 APAC SiC Wafer PL Mapping System Sales by Region

6.1.1 APAC SiC Wafer PL Mapping System Sales by Region (2021-2026)

6.1.2 APAC SiC Wafer PL Mapping System Revenue by Region (2021-2026)

6.2 APAC SiC Wafer PL Mapping System Sales by Type (2021-2026)

6.3 APAC SiC Wafer PL Mapping System Sales by Application (2021-2026)

6.4 China

6.5 Japan

6.6 South Korea

6.7 Southeast Asia

6.8 India

6.9 Australia

6.10 China Taiwan

7 EUROPE

7.1 Europe SiC Wafer PL Mapping System by Country

7.1.1 Europe SiC Wafer PL Mapping System Sales by Country (2021-2026)

7.1.2 Europe SiC Wafer PL Mapping System Revenue by Country (2021-2026)

7.2 Europe SiC Wafer PL Mapping System Sales by Type (2021-2026)

7.3 Europe SiC Wafer PL Mapping System Sales by Application (2021-2026)

7.4 Germany

7.5 France

7.6 UK

7.7 Italy

7.8 Russia

8 MIDDLE EAST & AFRICA

8.1 Middle East & Africa SiC Wafer PL Mapping System by Country

8.1.1 Middle East & Africa SiC Wafer PL Mapping System Sales by Country
(2021-2026)

8.1.2 Middle East & Africa SiC Wafer PL Mapping System Revenue by Country
(2021-2026)

8.2 Middle East & Africa SiC Wafer PL Mapping System Sales by Type (2021-2026)

8.3 Middle East & Africa SiC Wafer PL Mapping System Sales by Application
(2021-2026)

8.4 Egypt

8.5 South Africa

8.6 Israel

8.7 Turkey

8.8 GCC Countries

9 MARKET DRIVERS, CHALLENGES AND TRENDS

9.1 Market Drivers & Growth Opportunities

9.2 Market Challenges & Risks

9.3 Industry Trends

10 MANUFACTURING COST STRUCTURE ANALYSIS

10.1 Raw Material and Suppliers

10.2 Manufacturing Cost Structure Analysis of SiC Wafer PL Mapping System

10.3 Manufacturing Process Analysis of SiC Wafer PL Mapping System

10.4 Industry Chain Structure of SiC Wafer PL Mapping System

11 MARKETING, DISTRIBUTORS AND CUSTOMER

11.1 Sales Channel

11.1.1 Direct Channels

11.1.2 Indirect Channels

11.2 SiC Wafer PL Mapping System Distributors

11.3 SiC Wafer PL Mapping System Customer

12 WORLD FORECAST REVIEW FOR SIC WAFER PL MAPPING SYSTEM BY GEOGRAPHIC REGION

12.1 Global SiC Wafer PL Mapping System Market Size Forecast by Region

12.1.1 Global SiC Wafer PL Mapping System Forecast by Region (2027-2032)

12.1.2 Global SiC Wafer PL Mapping System Annual Revenue Forecast by Region
(2027-2032)

12.2 Americas Forecast by Country (2027-2032)

12.3 APAC Forecast by Region (2027-2032)

- 12.4 Europe Forecast by Country (2027-2032)
- 12.5 Middle East & Africa Forecast by Country (2027-2032)
- 12.6 Global SiC Wafer PL Mapping System Forecast by Type (2027-2032)
- 12.7 Global SiC Wafer PL Mapping System Forecast by Application (2027-2032)

13 KEY PLAYERS ANALYSIS

13.1 Lasertec Corporation

- 13.1.1 Lasertec Corporation Company Information
- 13.1.2 Lasertec Corporation SiC Wafer PL Mapping System Product Portfolios and Specifications
- 13.1.3 Lasertec Corporation SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.1.4 Lasertec Corporation Main Business Overview
- 13.1.5 Lasertec Corporation Latest Developments

13.2 KLA Corporation

- 13.2.1 KLA Corporation Company Information
- 13.2.2 KLA Corporation SiC Wafer PL Mapping System Product Portfolios and Specifications
- 13.2.3 KLA Corporation SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.2.4 KLA Corporation Main Business Overview
- 13.2.5 KLA Corporation Latest Developments

13.3 HORIBA, Ltd.

- 13.3.1 HORIBA, Ltd. Company Information
- 13.3.2 HORIBA, Ltd. SiC Wafer PL Mapping System Product Portfolios and Specifications
- 13.3.3 HORIBA, Ltd. SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.3.4 HORIBA, Ltd. Main Business Overview
- 13.3.5 HORIBA, Ltd. Latest Developments

13.4 Onto Innovation

- 13.4.1 Onto Innovation Company Information
- 13.4.2 Onto Innovation SiC Wafer PL Mapping System Product Portfolios and Specifications
- 13.4.3 Onto Innovation SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.4.4 Onto Innovation Main Business Overview
- 13.4.5 Onto Innovation Latest Developments

13.5 Toray Engineering

13.5.1 Toray Engineering Company Information

13.5.2 Toray Engineering SiC Wafer PL Mapping System Product Portfolios and Specifications

13.5.3 Toray Engineering SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)

13.5.4 Toray Engineering Main Business Overview

13.5.5 Toray Engineering Latest Developments

13.6 Semilab

13.6.1 Semilab Company Information

13.6.2 Semilab SiC Wafer PL Mapping System Product Portfolios and Specifications

13.6.3 Semilab SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)

13.6.4 Semilab Main Business Overview

13.6.5 Semilab Latest Developments

13.7 CETC Fenghua

13.7.1 CETC Fenghua Company Information

13.7.2 CETC Fenghua SiC Wafer PL Mapping System Product Portfolios and Specifications

13.7.3 CETC Fenghua SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)

13.7.4 CETC Fenghua Main Business Overview

13.7.5 CETC Fenghua Latest Developments

13.8 AK Optics

13.8.1 AK Optics Company Information

13.8.2 AK Optics SiC Wafer PL Mapping System Product Portfolios and Specifications

13.8.3 AK Optics SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)

13.8.4 AK Optics Main Business Overview

13.8.5 AK Optics Latest Developments

13.9 Qingruan Weishi

13.9.1 Qingruan Weishi Company Information

13.9.2 Qingruan Weishi SiC Wafer PL Mapping System Product Portfolios and Specifications

13.9.3 Qingruan Weishi SiC Wafer PL Mapping System Sales, Revenue, Price and Gross Margin (2021-2026)

13.9.4 Qingruan Weishi Main Business Overview

13.9.5 Qingruan Weishi Latest Developments
