A side-by-side milking machine is a type of device used for milking cows or other dairy animals that allows multiple animals to be milked at the same time. This type of milking machine is equipped with two milking units that are placed side by side. The milking units consist of a set of cups that are attached to the animal's udder using a vacuum seal. The cups are equipped with pulsators that create a vacuum that causes the milk to flow from the udder into a pipeline. The milk is then transported to a storage tank or other container for further processing.
