A signal generator is an electronic device that generates repeating or non-repeating electronic signals in either the analog or the digital domain. It is generally used in designing, testing, troubleshooting, and repairing electronic or electroacoustic devices, though it often has artistic uses as well.

Micro wave signal generators are expected to be the major market drivers in upcoming years. Asia-Pacific is expected to remain the largest market, particularly China, as a result of the shift of production base from developed economies to this region due to low manufacturing cost. Increase in the use of advanced technologies like Bluetooth and wireless services is expected to contribute to the growth of this industry. Arbitrary wave signal generator segment is also growing in importance benefiting from the emergence of digital modulation technology.
