The global Signal Jammer market size is predicted to grow from US\$ 802 million in 2025 to US\$ 962 million in 2031; it is expected to grow at a CAGR of 3.1% from 2025 to 2031.

A signal jammer is a kind of device which blocks reception or transmission of signals. Signal jammers have both malicious and benign uses. Military and the police often use them for the purpose of limiting or disrupting communications during the hostage situation, during bomb threats or when the military action is ongoing. The jammer can cut off all wireless communication system equipment, as long as it is in a certain wireless frequency within the rate range (for example: within its specific radius). It transmits radio frequency waves to prevent specific communication equipment from establishing or maintaining connection communication.

Global core signal jammer manufacturers include Raytheon, L3Harris Technologies etc. The top 3 companies hold a share about 40%. North America is the largest market, with a share about 35%, followed by Asia Pacific and Europe with the share about 30% and 25%. In terms of product, multi band/ channel signal jammer is the largest segment, with a share over 95%. And in terms of application, the largest application is educational institution, followed by government and law enforcement agencies.
