Signal line common mode chokes/filters are used to suppress high frequency noise on two or more data lines or power lines, which is often associated with electromagnetic interference (EMI). They allow DC or low frequency signals to pass while blocking unwanted high frequency noise. When selecting a suitable signal line common mode choke/filter, you need to consider the required impedance, frequency range, and current handling capability. Factors such as impedance matching, connector pin impedance, trace width, and shielding also need to be considered during design to ensure the effectiveness of the final design. Signal line common mode chokes/filters have good applications in automotive electronics, medical equipment, industrial control and other fields.
