Signal Line Common Mode Filter refers to an electromagnetic interference (EMI) suppression component installed on signal transmission lines to suppress common-mode noise while allowing the target signal, especially differential or balanced signal transmission, to pass with minimal distortion. It is widely used in electronic systems to improve electromagnetic compatibility (EMC), reduce conducted and radiated interference, and protect signal integrity in high-speed or noise-sensitive communication interfaces. In industrial practice, these common-mode filtering devices are designed for signal lines rather than power lines.
