The global Signal Source Analyzers market size is predicted to grow from US\$ 53.3 million in 2025 to US\$ 77.1 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

A signal source analyzer is an instrument that measures the magnitude and phase of the input signal at a single frequency within the IF bandwidth of the instrument. It employs digital techniques to extract useful information that is carried by an electrical signal.

The Signal Source Analyzer provides a true one-step phase noise measurement. This eliminates time-consuming measurement set ups and system calibration. Built-in low-noise reference sources, lock the system to the carrier of the measured signal, automatically enabling and dramatically improving measurement speed.
