## Abstracts

The global Silane Coupling Agent Si-69 market size is predicted to grow from US\$ 208 million in 2025 to US\$ 281 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Silane coupling agent Si-69 (chemical name: bis-[?-(triethoxysilyl)propyl] tetrasulfide) is a low molecular weight organosilicon compound with a light yellow to yellow transparent liquid appearance. Its core function is to form chemical bonds with the rubber organic matrix and inorganic fillers (such as white carbon black, silica) through the sulfur group and ethoxy group in the molecule, significantly improving the reinforcement of the filler, reducing the viscosity of the rubber, and improving the wear resistance and mechanical properties of the vulcanized rubber.

Silane coupling agent Si-69 is an important functional chemical. Si-69 can effectively improve the adhesion, heat resistance and chemical corrosion resistance of materials, significantly improving the performance of the final product. In terms of competition, the market competition for Si-69 is becoming increasingly fierce. Globally, large chemical companies such as Momentive, Evonik, and Shin-Etsu have a strong market share in this field, and many small and medium-sized enterprises are also actively participating in the competition.

In terms of industry development, the increasing demand for high-performance and environmentally friendly materials around the world has driven the expansion of the silane coupling agent market. As an important silane coupling agent, Si-69 has a very broad market prospect. Especially in industries such as automobiles, electronics and

construction, the requirements for material performance have become more stringent, which has promoted the application of Si-69.
