Silicon dioxide is a white powder with good fluidity, high purity, and no pollution. It has the characteristics of small particle size, large specific surface area, and many pores. At the same time, the distribution of silicon hydroxyl groups on the surface gives it good adsorption performance. In the pharmaceutical field, micro silica gel is a very useful pharmaceutical excipient and an excellent flow promoter in the tablet production process. It can greatly improve particle flowability, increase bulk density, increase tablet hardness, shorten disintegration time, and thus improve drug dissolution rate. However, the potential of silica is not limited to this. It has also been involved in higher-level applications, such as crystal stability promoters, targeted formulations, sustained-release formulations, etc. Therefore, it is also known as a "universal excipient".

United States market for Silica Pharmaceutical Excipients is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Silica Pharmaceutical Excipients is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Silica Pharmaceutical Excipients is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
