Silica fume concrete is a kind of high-performance concrete added with silica fume when producing concrete, and each index of concrete quality is several times higher than that of the traditional concrete without silica fume. The addition of silica fume can change some important physical performance indexes of concrete. According to the observation under the electron microscope, there is crystal growth in the voids of the cement paste of the concrete mixed with silica fume. Silica fume particles can fill the pores of relatively large cement particles, reducing the volume of pores. However, the large specific surface area of silica fume has greater influence on the workability.

The global market for Silica Powder Concrete is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
