The global Silicon Based Inoculants market size is predicted to grow from US$ 834 million in 2025 to US$ 1103 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Silicon-based inoculants are industrial additives used in the casting process. Their main component is silicon, and they are often combined with other elements (such as barium, calcium, aluminum, and rare earth elements). Their function is to improve the microstructure and mechanical properties of cast iron. They enhance the strength and machinability of castings by promoting graphitization, increasing eutectic clusters, refining grains, and suppressing the tendency for white iron formation.
