The global Silicon Based LED Chips market size is predicted to grow from US$ 3.3 million in 2025 to US$ 4.9 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Silicon-based LED chips are LEDs (Light Emitting Diodes) manufactured using silicon as the substrate material upon which the light-emitting layers, typically made of Gallium Nitride (GaN), are grown. Traditionally, sapphire or silicon carbide (SiC) have been the dominant substrate materials. However, silicon offers advantages such as lower cost, larger wafer sizes (leading to higher production yields), and compatibility with existing silicon semiconductor manufacturing infrastructure. This makes silicon-based LEDs potentially more cost-effective to produce.

The industry trend for silicon-based LED chips is one of increasing adoption and development. While sapphire-based LEDs still dominate the market, silicon-based LEDs are gaining traction due to their potential for cost reduction. This is particularly important in price-sensitive applications like general lighting. Key trends include:

Improved Performance: Ongoing research and development are focused on improving the light output, efficiency, and reliability of silicon-based LEDs to match or exceed those of sapphire-based LEDs. This involves addressing challenges like lattice mismatch between GaN and silicon, which can lead to defects and reduced performance.

Larger Wafer Sizes: The use of larger silicon wafers (e.g., 8-inch or 12-inch) is enabling

higher production volumes and lower per-chip costs, further enhancing the economic competitiveness of silicon-based LEDs.

Integration with Existing Infrastructure: The compatibility of silicon-based LED manufacturing with existing silicon semiconductor fabrication facilities allows manufacturers to leverage existing investments and expertise, reducing capital expenditures and accelerating time-to-market.

Applications in General Lighting and Beyond: While initially targeted at general lighting applications, silicon-based LEDs are also being explored for other applications such as automotive lighting, displays, and micro-LEDs.
