Silicon Carbide (SiC) Coated Graphite Substrate has the characteristics of high temperature resistance, oxidation resistance, high purity, acid, alkali, salt and organic reagents, and stable physical and chemical properties. Compared with high-purity

graphite, high-purity graphite begins to oxidize strongly at 400°C. Even if the temperature is not high, it will drop powder due to oxidation in long-term use, and it will adhere to the workpiece and table or pollute the use environment. Therefore, SiC coated graphite-based As a new consumable, MOCVD equipment, powder sintering and other processes gradually replace high-purity graphite.
