The global Silicon Carbide Single Crystal Ingot market size is predicted to grow from US\$ 904 million in 2025 to US\$ 3681 million in 2032; it is expected to grow at a CAGR of 22.3% from 2026 to 2032.

Silicon carbide single crystal ingot is a bulk monocrystalline body of silicon carbide (typically 4H-SiC or 6H-SiC) grown in a cylindrical or slightly tapered “boule” form by Physical Vapor Transport (PVT), solution growth or related high-temperature techniques. It is the intermediate material between SiC source powder and sliced/polished wafers, and provides the crystal structure, polytype and defect levels that ultimately determine device performance. Compared with silicon, SiC single crystals offer a much wider bandgap, higher breakdown electric field and superior thermal conductivity, making them the preferred base material for next-generation power and RF electronics.

Upstream of the silicon carbide single crystal ingot are high-purity SiC source materials, high-purity silicon and carbon precursors, seeded crystals, graphite crucibles and insulation, as well as PVT or solution-growth crystal furnaces and associated high-temperature process technology. In PVT growth, SiC powder is sublimed and re-condensed on a seed crystal to form a large single crystal ingot, with temperature gradients, ambient pressure and gas composition precisely controlled to stabilize the desired 4H or 6H polytype and suppress defects such as micropipes and dislocations. Downstream, the single crystal ingots are primarily used in the production of 4-inch, 6-inch, and 8-inch wafers.

In 2025, global production of silicon carbide single crystal ingot reached approximately 156 K Pcs, with an average global market price of around US\$ 5,918/Pcs. Production

capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 40%.

United States market for Silicon Carbide Single Crystal Ingot is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Silicon Carbide Single Crystal Ingot is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
