Silicon carbide slurry atomization disk is a kind of atomization nozzle widely used in the thermal spray industry. It is mainly used for spraying silicon carbide coatings. The atomizer disc usually consists of a metal disc and many densely arranged small holes. When in use, silicon carbide liquid is sprayed onto the rotating surface of the disc through small holes, causing the effect of droplets flying and atomization. By purging with cooled air or inert gas, the droplets can quickly solidify and form a thin film, resulting in a uniform silicon carbide coating.
