The global Silicon-coated PET Release Film market size is predicted to grow from US\$ 6165 million in 2025 to US\$ 10320 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, global sales of silicone-coated PET release film reached 920,000 tons, with an average selling price of US\$6,850 per ton. Global total production capacity in 2025 was approximately 1.08 million tons, with an average industry gross margin of about 25%. Silicone-coated PET release film is a high-performance functional film material formed by uniformly coating an organosilicon release layer onto the surface of polyethylene terephthalate (PET) film as the substrate. It is mainly used to protect adhesive surfaces, facilitate die-cutting transfer, and maintain stable peel performance during precision machining. This product features high cleanliness, high temperature resistance, strong dimensional stability, controllable release force, and high surface flatness. It can be configured with different performance levels, such as light, medium, and heavy release, to meet application requirements, and is widely used in electronic die-cutting, lithium battery packaging, optical films, industrial tapes, medical adhesive materials, automotive electronics, and semiconductor manufacturing.

The upstream sector primarily involves suppliers of PET resin, silicone release agents, silicone oil, solvents, additives, precision coating equipment, and functional film raw materials. Downstream consumption mainly comes from consumer electronics tapes, lithium battery insulating materials, optical display films, medical adhesive products, industrial protective films, and automotive electronic adhesive systems.

With the rapid development of new energy vehicles, energy storage systems, flexible displays, AI electronic devices, and high-end electronic manufacturing industries, the

demand for high-performance release films continues to grow. Future products will develop towards ultra-thinness, high cleanliness, high temperature resistance, low migration, solvent-free coating, and environmentally friendly recyclability. Meanwhile, upgrades in semiconductor packaging, expansion of power battery production, and the expansion of the high-end medical materials market will continue to bring new market demands and business opportunities.

The market for silicon-coated PET release films is experiencing continuous growth alongside the development of the electronics manufacturing, new energy, and high-performance adhesive materials industries. As a crucial component of functional film materials, silicon-coated PET release films are primarily used to protect adhesive layers, support functional materials, and enable precision die-cutting and transfer processes. They have wide applications in consumer electronics, lithium batteries, medical materials, automotive electronics, and semiconductor packaging. With end products trending towards thinner, lighter, more precise, and more reliable designs, the market demand for products with high cleanliness, high stability, and controllable release performance is constantly increasing, driving continuous industry upgrades.

From a market demand structure perspective, consumer electronics and the new energy industry remain the largest application markets. Smartphones, tablets, wearable devices, and display modules extensively utilize adhesive materials and precision die-cutting processes, resulting in a stable long-term demand for high-end release films. Simultaneously, the rapid expansion of the lithium battery and new energy vehicle industries is driving growth in demand for battery encapsulation tapes, insulating materials, and protective films, further expanding the application scale of silicon-coated PET release films in the new energy sector. Furthermore, the medical adhesive materials, optical films, and industrial protective film markets are also emerging as new sources of growth.

From a technological development perspective, silicon-coated PET release films are evolving towards ultra-thinness, high cleanliness, and environmental friendliness. With the upgrading of semiconductor packaging, flexible displays, and high-density electronic assembly technologies, market demand for release films with low migration, high temperature resistance, and low static electricity is continuously increasing. Simultaneously, the application of solvent-free coating, water-based silicon coatings, and recyclable environmentally friendly materials is accelerating to meet green manufacturing and environmental regulations. Furthermore, the application of high-speed precision coating equipment and online testing technologies further improves product consistency and production efficiency.

Overall, the silicon-coated PET release film market is a high-growth segment within the functional materials field, with its growth primarily driven by consumer electronics upgrades, the expansion of the new energy industry, and the upgrading of high-end adhesive materials. In the future, with the continued development of AI terminals, energy storage systems, flexible electronics, and the semiconductor industry, high-performance, high-cleanliness, and environmentally friendly release film products will become the main growth direction for the industry. Companies with core coating technologies, material R&D capabilities, and high-end customer resources are expected to continue to expand their market share and obtain higher added value in future market competition.
