The global Silicon-infiltrated Reaction-bonded Silicon Carbide (SiSiC/RBSC) market size is predicted to grow from US\$ 1315 million in 2025 to US\$ 2123 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Silicon-infiltrated reaction-bonded silicon carbide (SiSiC/RBSC) is a composite material formed by infiltrating liquid silicon into a compacted mixture of silicon carbide and carbon; the silicon reacts with the carbon to generate new SiC, which bonds the original particles together. Characterized by low porosity and minimal outgassing, the material offers high specific stiffness, wear resistance, corrosion resistance, high-temperature stability, and good electrical conductivity (reducing static electricity accumulation), making it suitable for precision structural components and high-performance ceramic parts.

Upstream components of the supply chain include silicon carbide powder, graphite/carbon sources, metallic silicon, binders, molds, sintering furnaces, silicon infiltration furnaces, and precision machining equipment. Downstream applications include kiln furniture, heat exchangers, seal rings, nozzles, roller rods, semiconductor equipment, chemical pumps and valves, and ballistic armor.

The global market price for SiSiC/RBSC is approximately \$21,000 per ton; global sales volume is around 64,000 tons, with an annual production capacity of 70,000-85,000 tons and an industry profit margin of approximately 28%.
