Silicon tetraiodide applies for the manufacturing and etching of silicon wafers used in microfabrication of electronic related components. This product has been used for the syntheses of Tetrakis(dialkylamino)silanes. SiI₄ was proposed as a potential precursor for the deposition of Si-based films by CVD. SiI₄ is advantageous, as it is a simple Si-containing precursor which can be used in thermally or UV-assisted CVD deposition processes. SiI₄ has a simple structure and does not require laborious synthetic procedures. Tetraiodosilane also provides high film growth rates and low minimum film deposition temperatures.
