According to our LPI (LP Information) latest study, the global Silicon Monoxide market size was valued at US\$ 118.5 million in 2023. With growing demand in downstream market, the Silicon Monoxide is forecast to a readjusted size of US\$ 252.4 million by 2030 with a CAGR of 11.4% during review period.

The research report highlights the growth potential of the global Silicon Monoxide market. Silicon Monoxide are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Silicon Monoxide. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Silicon Monoxide market.

Silicon monoxide, SiO, is an amorphous solid which does not have a characteristic X-ray diffraction pattern. SiO is brown in powder or pressed form and black in granular or lump form. It is stable at room temperature, but at temperatures of 400-800°C, X-ray readings show traces of the disproportionation products silicon and quartz. SiO is a highly desirable coating material due to its high deposition rate and ease of evaporation using low cost resistance-heated coating systems. SiO is also noted for its excellent environmental stability.

The major manufacturers of silicon monoxide are Materion, Osaka Titanium Technologies, EMD Performance Materials (Merck), etc., with the top three accounting for about 40%.

Japan is the main market at about 30%, followed by China at about 25%.
