The global Silicon Waste Recycling and Utilization market size is predicted to grow from US\$ 2279 million in 2025 to US\$ 4463 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

Silicon waste recycling and utilization refers to the closed-loop resource recycling process that transforms various silicon-containing wastes (such as silicon wafer cutting sludge, crushed silicon wafers, wafer scraps, waste photovoltaic module silicon wafers, and smelting slag) generated during the production, processing, and product retirement stages of silicon-based industries such as photovoltaics, semiconductors, and industrial silicon smelting into qualified silicon-based raw materials such as recycled industrial silicon, photovoltaic-grade recycled polysilicon, semiconductor-grade recycled silicon material, and silicon-based powder. These materials are then reused in silicon material production, silicon wafer manufacturing, photovoltaic modules, semiconductor devices, metallurgy, and new energy materials. Based on the principles of reduction, resource recovery, and harmlessness, it significantly reduces energy consumption and carbon emissions from primary silicon smelting and improves the comprehensive utilization rate of silicon resources. It is a core link in achieving green, low-carbon, and sustainable development of the silicon-based industry chain.
